

MAKING YOUR GROOVES SOUND BETTER: ADDING GHOST NOTES

If you want to give your playing a new dimension, then adding **ghost notes** is a really great way to do it. Adding some inner dynamics to your grooves is your first step to becoming an advanced player.

Try and keep your **backbeat** loud and your **ghost notes** quiet. To achieve this, play your ghost notes 1-2 inches from the snare drum head. This technique is called a **tap stroke**.
